

## CSUR's Technical Luncheon Series – January 2020

For January's session of the Technical Luncheon Series, CSUR invited Racim Gribaa (Global LNG Consulting Inc.) to speak about Canada's prospects within the LNG sector. With CSUR already involved and active with its own LNG initiative together with the Government of Alberta, the talk provided some additional points of synergy on the importance of Canada's unconventional resource sector for the LNG industry.

Climate change, global demographics, socio-economic factors, geo-political tensions and growing energy demands are and will continue to drive the need for having secure & stable energy sources for various regions of the world.

The message from the speaker was quite clear and consistent with that of many other experts who are familiar with the global energy picture. Canada is in an enviable position of having the resources that the world wants and needs, especially given our Environmental, Social & Governance (ESG) standing.

In summary, Canada has the potential to make a significant impact to both sides of the equation – supplying the world with clean energy and at the same time lowering the global emissions.

### Canada's LNG Future

**PRESENTER:** Racim Gribaa, Global LNG Consulting Inc.

Racim Gribaa leads Global LNG Consulting advisory practice with over 20 years in the energy sector.

Racim served as Managing Director for Deloitte in Canada, prior to that he headed the LNG marketing and shipping optimization department of ExxonMobil and Qatar Petroleum joint stock company RasGas (a major integrated LNG Company in Qatar operating the north field 900 Tcf, RasGas operates 7 of Qatar's 14 LNG trains, 27 LNG vessels, producing and exporting 37 million tons per annum with customers in Africa, Asia, Europe, North & South America).
